Cowlitz Public Utility District #1 reserves the right to change the fees, application and process at anytime without notification.

Setting up Residential Telephone Service

Thank you for choosing Qwest as your service provider on this project. In order to provide you with timely service, you will need to complete the following on any new home construction.

Placing

Since Qwest tries to place our pedestals at the same location as the power transformers, any trenching can usually be shared by the utilities. However, if any conduit is placed, **there is one conduit run for each utility (including any type of roadway crossings).**

The homeowner / builder must then call the BSW Group @ 800-566-3009 to request a reel of service wire. Give the footage of trench plus extra for splicing. The standard service wire allows for up to three different phone numbers per home.

Only one service wire per home, Qwest does not feed two dwellings off one wire. If there is a chance that there will be additional development, please place an additional service wire in the trench or call Qwest engineering at the number below.

After the power company has inspected the open trench, the Qwest service wire can then be placed in the trench with at least 12" separation. Be sure to leave at least 10' at the point where the meter base will be placed on the home and the same at the Qwest pedestal. The trench can be backfilled; Qwest does not need to inspect the trench.

The electrical contractor is to provide a ground wire at the power meter location. This is for Qwest to ground our phone lines.

Scheduling

A second phone call is required by the homeowner / builder to place an order to turn on the service @ 800-244-1111. The order will then be placed in the work load of our technicians and will be worked on as soon as possible.

If there are any questions, please call the engineering office as listed below.

Residential Electrical Service Application Requirements

The following list provides you with the requirements to be met before applying for your new residential electrical service.

REQUIRED ITEMS:

- A non-refundable \$100 application fee is required.
 - Service address obtained from the local governmental agency and posted at the site.
 - Electric heat load(s) include: heat pump tonnage (Ton), locked rotor amps (LRA), kilowatts (KW) of auxiliary heat strips.
 - Road/driveway installed and capable of supporting heavy trucks.
 - House perimeter staked and the planned meter base location marked.
 - Copy of your assessor's map and/or survey, or short plat, and property corners identified in the field.
 - Copy of your title report, recorded warranty deed, or real estate contract.
 - Site plan including: all buildings, well, septic system, retaining walls, fences, and landscaping.
-

Residential Electrical Service Installation Process

The following list provides you with the necessary steps to be completed in order to obtain electrical service.

- Step 1: Complete the PUD *Residential Electrical Service Application*.
- Step 2: Obtain an electrical permit from Washington State Department of Labor & Industries for countywide area or the City of Longview Community Development for area inside the city limits of Longview.
- Step 3: Call your PUD Engineering Planner to schedule an on-site meeting.
- Step 4: Notify other utilities for the installation of their facilities.
- Step 5: Install the required customer-owned electrical service equipment.
- Step 6: Make payment for your total job cost prior to the installation of PUD facilities.
- Step 7: Obtain the necessary easement signatures, if required (PUD will provide easement documents).
- Step 8: Obtain an electrical inspection from the appropriate governmental agency.
- Step 9: Call for underground utility locates at 1-800-424-5555 and allow two full business days before digging; complete your trenching requirements, and notify your PUD Engineering Planner.

Note: Any deviation from the electrical design, once established, may result in incurring additional costs for redesign and construction may be delayed. It is the customer's responsibility to provide all the necessary PUD requirements and specifications to subcontractors.

Thank you for closely following these steps to help ensure that your electrical service is installed in a safe and timely manner.
